PROFESSIONAL SUMMARY

Computer Science and Engineering student with expertise in low-level systems, client-server architecture, and object-oriented design. Proven developer skilled at bridging backend logic with intuitive UI design to deliver impactful end-to-end user experiences. Self-motivated, collaborative, and highly effective in fast-paced environments.

EDUCATION

Santa Clara University, Santa Clara, CA

Expected graduation: 06/2028

Bachelor of Science in Computer Science and Engineering | GPA: 3.8

- Relevant Coursework: Data Structures; Theory of Algorithms; Computer Networks; Embedded Systems; Logic Design; Electric Circuits; Computer Architecture (Planned); Operating Systems(Planned)

PROJECTS

Project: NES Emulator

- Engineered a behavioral hardware emulator in C++ by reverse-engineering proprietary console architecture. Applied object-oriented design principles to model the 6502 CPU, 2C02 PPU, and Bus.
- Designed and optimized low-level data structures to manage precise hardware state changes, clock cycles, and memory mapped I/O synchronization.
- Developed a robust validation and testing workflow to verify CPU/PPU state changes, leveraging existing software and advanced debugging skills to isolate architectural bugs.

Project: Learnimal (Agentic Terminal Emulator)

- Forked the Alacritty terminal emulator built with Rust, modifying the low-level rendering pipeline to extract live screen grids and render a native, real-time UI overlay.
- Architected a lightweight client-server framework featuring a Python FastAPI backend that processes JSON payloads and streams asynchronous token responses to the client via Server-Sent Events.
- Integrated a local SQLite database to enable fast historical query lookups for an on device ReAct agent.

WORK EXPERIENCE

Retail Sales Specialist

07/2025-01/2026

Apple, Inc., Santa Clara, CA

- Leveraged extensive technical expertise in Apple hardware and software to diagnose customer needs and present tailored, comprehensive solutions to non-technical audiences; Consistently Top 10 in the store at Accessory Attach and Customer Satisfaction scores.
- Proactively identified and drove revenue growth by establishing a consistent, quarterly feedback loop with managers to refine strategies; Led to a ~20% gain Quarter to Quarter in Apple Care attach.

SKILLS

Languages: C, C++, ARM32 Assembly, Python, Java, Rust | **AI/ML Tooling:** llama.cpp/Ollama, Copilot, Cursor, Claude | **Applications:** Git/GitHub, IDA, Ghidra(+ MCP), Excel, Matlab, Adobe Lightroom, Adobe Premier Pro, Final Cut Pro | **Operating Systems:** Windows, MacOS, Linux (Headless and with Desktop Environment)
